ECTO

the past, the present, the future

A database wrapper and language integrated query for Elixir

3

Ecto is a domain specific language for writing queries and interacting with databases in Elixir.

Maintainers

Eric Meadows-Jönsson, José Valim, James Fish, Michał Muskała

MongoDB adapter for Ecto — Edit

Question time

Who's using Ecto?

Who's using mongodb_ecto?

Who's using Ecto 2.0whatever?

Ecto history

v0.1.0 - 01.05.2014

```
defmodule User do
  use Ecto. Model
  queryable "users" do
    field :name, :string
    field :age, :string
  end
 validate user,
           name: present(),
           age: present(message: "must be present"),
           age: greater_than(18)
end
```

subqueries

subqueries

many_to_many

concurrent, transactional tests

concurrent, transactional tests

```
Ecto.Adapters.SQL.begin_test_transaction(MyApp.Repo)
                              by
Ecto.Adapters.SQL.Sandbox.mode(MyApp.Repo, :manual)
                              and
unless tags[:async] do
  Ecto.Adapters.SQL.restart_test_transaction(MyApp.Repo, [])
end
                              by
:ok = Ecto.Adapters.SQL.Sandbox.checkout(MyApp.Repo)
unless tags[:async] do
  Ecto.Adapters.SQL.Sandbox.mode(MyApp.Repo, {:shared, self()})
end
```

parallel preloads

by default

easier associations

no callbacks

Ecto.Schema

changeset changes

Ecto.Multi

Ecto.Multi

```
defmodule UserManager do
  alias Ecto.Multi
  import Ecto
  def password_reset(params) do
    with {:ok, account} <- load_account(params),</pre>
         multi = password_reset_multi(account, params),
         {:ok, results} <- Repo.transaction(multi),</pre>
          :ok <- send_notification(results.account),</pre>
     do: {:ok, results}
  end
  # ...
```

Ecto.Multi

```
@doc false
def password_reset_multi(account, params) do
    account = account_password_reset(account, params)
    access_log = log_password_reset(account, params)

Multi.new
    |> Multi.update(:account, account)
    |> Multi.insert(:log, access_log)
    |> Multi.delete_all(:sessions, assoc(account, :sessions))
end
```

schemaless queries

schemaless queries

schemaless queries

multiple schemas, same table

```
defmoudule RegistrationSchema do
  use Ecto.Schema
  schema "" do
    field :foo, :string
    field :bar, :integer
    embeds_one :resource, Resource do
      field :baz, MyEctoType
    end
  end
end
```

```
def validate(params) do
  %RegistrationSchema{}
  |> cast(params, [:foo, :bar, :baz])
  |> validate_required([:foo, :bar])
  |> # some other validations
  |> to_tuple
end
defp to_tuple(%{valid?: true} = c) do
  {:ok, apply_changes(c)}
end
defp to_tuple(%{errors: errors}) do
  {:error, errors}
end
```

schemaless changesets

KISS

Future?

```
defmoudule RegistrationSchema do
  use Ecto.Schema
  schema "" do
   field :foo, :string
    field :bar, :integer
    embeds_one :resource, Resource do
      field :baz, MyEctoType
    end
  end
end
```

Separate data and database

Ecto 2.0 is data-centric

Ecto 2.0 is less opinionated

Ecto 2.0 is not your model

Ecto 2.0 is not a solution

Ecto 2.0 is a toolbox
